Products, Instruments and Services for Implantology

# Innovation & Flexibility

For over 30 years working with the best dental professionals

## Our Mission

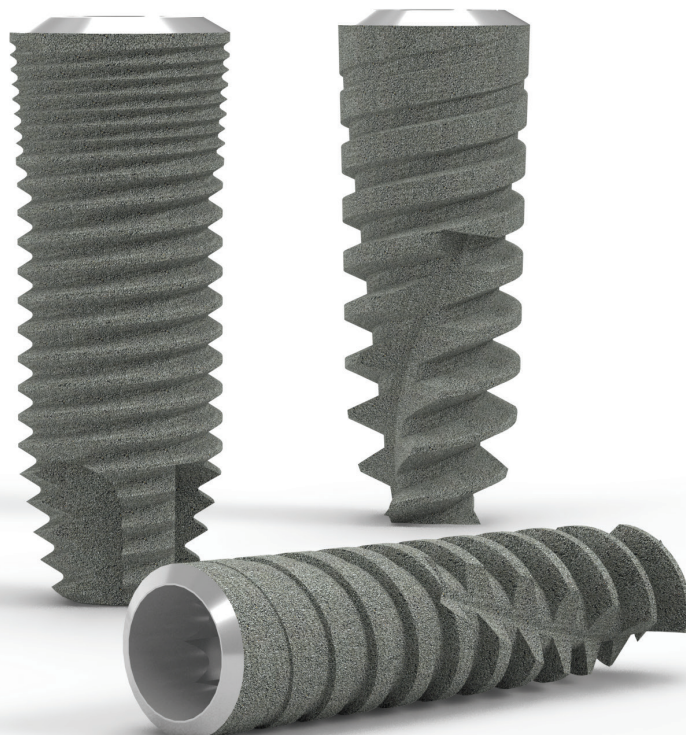

We provide innovative products, technical assistance, and training programs to the best implantologists. We offer the qualitative excellence indispensable for the clients' long term satisfaction.

## Why we are able to satisfy the most qualified professionals' demands

---

FMD is an Italian company, based in Rome, that for more than 30 years has been designing, producing, and selling dental implants and surgical instruments. Our product lines are able to respond to any clinical necessity of doctors or technicians. We are characterized by our capacity to greatly anticipate the market's trends and our availability to prototype, personalize, and expand our product lines.

Controlling the whole production line, we are capable to personalize and create instruments and dental implants based on the doctor's demands. Constantly updated on the most recent medical-dental developments, we are constantly in contact with the product users and we are able to assist them directly when facing problematic situations and new technical challenges.

A close-up photograph of a microscope's objective lenses. The lenses are metallic and have various markings, including 'N PLAN 20X/0.40' and 'HCX 63X'. The background is blurred, showing the rest of the microscope. There are decorative orange and blue circles overlaid on the image.

## Certifications and Innovations

---

FMD has UNI EN ISO 9001 and UNI CEI EN ISO 13485 certifications. All products follow the European Directive 93/42/CEE and all the subsequent amendments and additions dealing with Medical Devices. The products are all certified by the Istituto Superiore di Sanità (Superior Health Institute).

Surface treatments are fundamental; FMD uses sterilization techniques with gamma rays and cold plasma decontamination activated through Argon.

UniQo, an implant line developed by FMD to answer the most recurring dentists' necessities, offers a practical solution to the everyday use of implants. This implant line has a universal platform for all implant sizes and diameters. It's easy to use, cost effective, and efficient.

Decorative graphic elements at the bottom of the page, including a large blue circle on the left, a blue hexagon in the center, and an orange hexagon on the right.

## Our Story

---

FMD started in 1984 as a manufacturer of mechanical components for eye surgery electro-medical devices. In 1986 there was the transition to implantology, especially thanks to Dr. Salvatore Di Silvestro. Because of the knowledge and technical abilities developed in the field of eye surgery (tolerance in microns) the switch to implantology (tolerance in cents) was easy. The transition was also helped by the use of titanium in both manufacturing processes and the FMD's competitive prices.

In 1987 dental implant manufacturing became FMD's main business. The company became one of the first Italian companies to reproduce international dental products. From there it started to develop its own designs that resulted in today's implant lines, such as I-Fix and UniQo.

In 1998 FMD began creating a worldwide network to market and sell its products in the international markets. Thanks to the collaboration with Prof. Stefano Fanali and the support of Chieti University, FMD was one of the first companies in Italy to have CE certification to sell dental implants.

In 2004 the company expanded and moved the manufacturing site to Ladispoli, few kilometers from Rome. The new site has a white room and a training center for theoretical and practical courses. There has been a constant development to improve and provide better products and services, that continues to this day.

Today FMD markets and sells its products in more than 30 countries worldwide and in four continents.

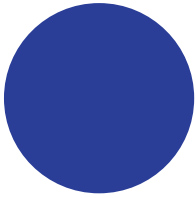

## Our Training Program

Technological innovations and new surgical techniques in dental practice require constant training. FMD offers theoretical and practical training courses throughout the year, in Italy and abroad.

Training courses are tailored to address the doctors' every day clinical challenges and familiarize with new trends, under the guidance of national and international renowned experts.
